

ULTRA Light

Company Profile

Who We Are

Ultra Light SA (PTY) LTD based in KwaZulu-Natal, South Africa, is a designer and manufacturer of luminaires and illumination systems. Our product offering focuses on the Wholesale, Industrial, Commercial, Retail, and Architectural sectors with our unique optional site-specific warranty.

Over and above our range of commercially available products, we provide bespoke luminaire and control system design and manufacturing, we offer OEM (Original Equipment Manufacturer) production. Through our solutions division, we offer turnkey solutions, including an industry-first luminaire performance guarantee combined with our in-house SLA (Service Level Agreement). With the rapid advances in technology, Ultra Light is able to remain abreast by our strategic partnerships with other industry leaders in their respective fields.

Our passion and creativity-driven enthusiasm for service excellence differentiates us from our competitors.

Being a customer-centric company, we endeavour to be your strategic and value-added partner along with developing and producing sustainable, energy efficient, world-class luminaires and illumination systems.

Why Work With Us

We design and manufacture from ground up. We own our IP and control our R&D thus introducing the latest technology to market.

Industry's first luminaire performance guarantee integrated into our Protect SLA.

We strive to offer you, our customer the best affordable price and product that fulfils your intended purpose.

We are transparent and ethical in our business conduct, as building our people and communities is one of our founding values.

We cover both ends of the market, from budget sensitive economical products to high-end premium systems and solutions.

We do not focus purely on providing illumination, but also on how illumination effects and benefits mankind, your business productivity and the environment.

Swift to integrate advances in technology, "Tunable white" (2014) Bluetooth, High efficacy over 155lm/W (2018) POE (2019).

Average ROI between 18-36months, Typical IRR above 25%, Optimal Cost of Ownership.

Creativity and passion is at the heart of our people, who are fulfilled by our customer satisfaction, as a result you can be assured that Ultra Light will bring you a constantly evolving range of products and systems that are infused with the latest innovations.

What Can We Offer

1. Illumination assessment and specification

There are so many options available out there, but what does all that data mean? This is likely to be a sizeable investment and needs to produce the results that you are expecting. Getting it wrong could lead to significant losses not to mention the safety hazards. Whether you are looking to embark on a project immediately, looking to write a specification or if you are in the process of doing a feasibility case study, we are at your service. We undertake a methodical process with measurable added value, including some of the following:

Site inspection and/or consultation with the client; proposed budgetary cost, cost of ownership, carbon emissions reduction and/or Project feasibility and ROI calculations; lighting simulations together with lighting layout and project finance.

We offer an objective approach because you are at the centre of why we do what we do.

2. PROTECT SLA

We understand that everything that's important to you begins with light; from the start of your day to your business operations, therefore we understand the asset that good lighting means to you. Let us ensure the optimum functionality of your luminaires at all times with our PROTECT SLA. This service offers protection of your asset, your people, and your reputation - because what's important to you, is important to us.

5. OEM production

As many design houses, corporates, and wholesalers wish to focus their attention on designs and marketing, they may not have the infrastructure or experience to undertake full-scale manufacturing of luminaires or illumination systems. We are able to partner with you to fill this need.

With comprehensive facilities, our team is able to take your concepts and convert these into internationally compliant safe products, packaged under your brand, giving you the competitive edge and assurance of responsible manufacturing and high-quality products.

Ultra Light ensures conformance with the relevant IEC, EN, SANS, and RoHS standards. Our creative specialists provide you with CAD or IGS files, 3D renders and 3D models, full-scale prototypes, IES files, and ILAC-approved laboratory safety test reports.

4. Bespoke Solutions

Whether it is a luminaire or control system, everyone has a set of unique requirements and expectations.

Despite this, most luminaire manufacturers will try to fit you into a mould which they have created. You can imagine the extensive resources required in the development of luminaires or control systems and as a result, many manufacturers will not entertain a request for a Bespoke Solution unless the volumes are substantial. This approach may work in some cases, but your needs are unique and real.

You have requirements, but who holds the expertise to understand these requirements and transform them into something of value?

With a wealth of knowledge, Ultra Light's creative specialists, engineers, software architects, and international partners work in synergy, using reverse engineering methodologies to create luminaires, illumination systems, and control systems to produce the results you envision. Our team ensures that the Bespoke Solution functions in-sync with your business operations, which is easily accessible through a user-friendly interface.

We are passionate in our belief that luminaires and illumination systems are there for your betterment, and as such, should be designed around you, and not you around them.

3. Turnkey Solutions

Designing, installing, and maintaining a new lighting system can be complicated. With Ultra Light, you get peace of mind, as you deal with one person who takes responsibility for your lighting solution. One point of contact means you can focus on your core business while our team focuses on your project. This saves you both the time and hassle of trying to coordinate with all the various contractors involved. We manage the entire process - from planning, supply, installation, safety, project management to commissioning, and even maintenance.

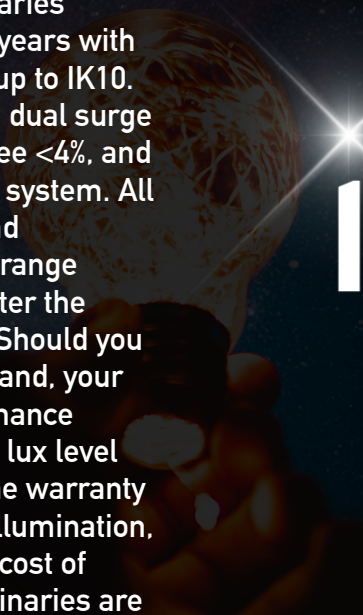

Even though we manufacture an extensive range of products ourselves, we will always choose the best product for you, even if it may be from another manufacturer. In this way, you get a state-of-the-art solution, delivered at a competitive price.

Flexibility at its best... you are the client, you pick and choose which services you require. This means you can choose either a complete turnkey solution or pick only the services that suit your need. The choice is yours.

Light

Our Brands

Our professional range of luminaires is becoming synonymous with quality and durability in the industrial, commercial, and architectural sectors. Designed and manufactured to International standards, we are proud to say that these luminaires come with a five-year/90000-hour warranty (LM80-B10 @ 85°). The luminaires housings carry a warranty of up to ten years with a mechanical impact protection rating up to IK10. Standard features in this range include dual surge protection up to 10kA, Flicker/Ripple free <4%, and independent circuits with a multi-drive system. All Itech luminaires are both repairable and upgradable, as an investment into this range ensures reduced maintenance costs after the luminaire exceeds its usable lifespan. Should you opt for our PROTECT SLA under this brand, your warranty will be converted to a performance warranty, whereby the pre-determined lux level requirement will be maintained over the warranty period. If you are looking for superior illumination, low maintenance, meaningful ROI and cost of ownership, then the Itech range of luminaires are sure to exceed your expectations.

itech

Ecolite products have been designed and manufactured in South Africa for a range of commercial, retail, and residential applications. These cost effective luminaire options carry a three-year/50000-hour (which ever comes first) warranty and are fully repairable. Built-in surge protection comes standard across the Ecolite range of products. With high lumen efficacy and proven reliability, the Ecolite range of products are sure to satisfy your illumination design requirements for these sectors

Our Brands

Classic

The Emerald Classic range is specifically focused around our Interior Décor, Designers and Architectural clients. The products in this range are constantly evolving as the demand for the latest fashion trends emerge from the various corners of the globe. Working closely with you, our designers will customise or develop bespoke luminaires to suit your individual requirements. Allow us to integrate the science and art of lighting by enhancing your design elements whilst embodying the latest digitisation, transforming your creative aspiration into a design master piece.

Luxury

Our Emerald Luxury Collection has been exclusively reserved for our most prominent patrons. Be it a table lamp, chandelier, down light, or an architectural creation, luminaires in this range are discretely designed to meet your unique needs and/or ambiance of your respective establishments.

One of our leading creative specialists will meet with you to capture your inspirational thoughts and transform these into an illuminating masterpiece. Each luminaire is crafted utilising highly engineered materials and the world's finest lighting technologies, with some precious finishes that complement the elite brand name, such as 24k gold plating, pure silver, or fine crystal; whatever the case may be.

A personalised emblem specifically designed especially for you, is embedded into the main structure of the luminaire, highlighting its exclusivity.

A unique serial number is then given to each luminaire, identifying its manufacture history together with the individuals involved in creating this exceptional piece.

One of the company's directors personally inspects the individual pieces, and issues a certificate of authentication for this exclusive production run, guaranteeing that this collection satisfies your desire for distinctiveness.

Our Brands

Since 1964 Tru-Lite has been manufacturing luminaries for the domestic retail market. The brand was brought back to life to manufacture high quality, cost effective luminaires in South Africa for the commercial, retail, architectural and residential markets. It focuses its design around a market where a client does not want an LED luminaire but a luminaire where-by the client wants the ease of just replacing a bulb. The brand caters for all needs, whether it be a simple downlight to a complex pendant, Tru-lite does it.
